

## 4 结语

建立非小块状花纹发声模型,采用40线切割分析,有效反映了光面轮胎、条状花纹和大块状花纹轮胎的发声情况。BPTNS分析系统能对大块状花纹噪声进行仿真分析,克服了TNS系统对大块状花纹仿真误差较大的问题,试验表明了其分析结果的准确性。BPTNS系统不仅适用于大块状花纹轮胎(如单导向性大羊角花纹等)、光面轮胎和条状花纹轮胎,且适用于轻型载重轮胎噪声分析,有很大推广应用价值。

**Abstract:** The test model for noise simulation of tire with non-small block tread patterns was investigated. Based on the sound-generating characteristics of smooth tread, ribbed patterns and block patterns of tires, the original sound-generating model was revised, a physical model suitable for sound-generating test of tire with non-small block patterns was proposed, the relative programmes BPTNS and BPODS were worked out, and the accuracy of the model was confirmed by the simulation test.

**Keywords:** tire; patterns noise; non-small block patterns; sound-generating model

## 风神公司 385/55R19.5 全钢载重子午线 轮胎研制成功

中图分类号:TQ336.1 文献标识码:D

2006年8月,风神轮胎股份有限公司成功研制出385/55R19.5全钢载重子午线轮胎。该轮胎依据ETRTO—2004设计,所配轮辋宽度为311 mm,新胎充气断面宽度为386 mm,充气外直径为919 mm,属55系列低断面无内胎轮胎,用在中型载重汽车上取代双胎,非常适合国外市场的发展趋势,产品将全部出口欧洲。它的研制成功扩大了该公司出口轮胎的规格品种,增强了该公司在国际轮胎市场的竞争力。

应客户要求,该轮胎采用HN809花纹,非常

适用于高速公路行驶的长途运输拖车;采用宽行驶面、高胎冠弧设计,可减小接地压强,延长轮胎行驶里程;根据胎面受力情况,合理分布花纹沟位置,采用直线形花纹沟以及细小的全深花纹槽设计,滚动阻力小,防侧滑性能好;胎肩采用封肩形式,具有良好的防不规则磨损性能;采用具有高弹性、高耐磨、耐疲劳、低生热的高性能胎面胶,特别适用于高速行驶。该轮胎与地面抓着性能良好,安全性及运营效率较高。

经检验,该产品全部达到或超过相关标准,并于2006年9月通过ECE认证,为产品出口欧洲市场做好准备。
