

# Structure and Properties of StronWi™ KTC/HNBR Nanocomposites

HUANG Ting-ting, CHEN Chun-hua, XIN Zhen-xiang

(Qingdao University of Science and Technology, Qingdao 266042, China)

**Abstract:** The StronWi™ KTC/HNBR nanocomposites were prepared by mechanical blending method, and the influence of addition level of StronWi™ KTC on the structure and properties of nanocomposites was investigated. The results showed that, the crosslink density of composites was significantly increased by adding small amount of StronWi™ KTC. As the addition level of StronWi™ KTC increased, the friction between the polymer chains was hardly increased. The best comprehensive physical properties were obtained when the addition level of StronWi™ KTC was 20 phr. The thermal stability of nanocomposites was also improved with StronWi™ KTC. From SEM test it was found that StronWi™ KTC was finely dispersed in HNBR matrix and exhibited orientation.

**Key words:** HNBR; StronWi™ KTC; structure; property

## 一种抗中毒型硅橡胶的制备方法

中图分类号:TQ333.93 文献标志码:D

由同济大学申请的专利(公开号CN 101824224A,公开日期2010-09-08)“一种抗中毒型硅橡胶的制备方法”,涉及的抗中毒型硅橡胶为双组分加成型室温硫化硅橡胶。其中组分A由乙烯基硅油、填料、高活性催化剂和抗中毒剂组成,以配方组分总量100份计,乙烯基硅油为10~80份,填料为5~50份,高活性催化剂为0.01~1份,其余为抗中毒剂;组分B由乙烯基硅油、含氢硅油和填料组成,以配方组分总量100份计,乙烯基硅油为10~80份,填料为5~50份,其余为含氢硅油。将组分A和B在室温下按照1:1比例混合均匀,室温固化制得产品。该产品可以有效抑制由含锡、含铅类金属离子化合物以及含硫、含氮类有机化合物引起的催化剂中毒现象。

## 一种三元乙丙橡胶发泡材料的制备工艺

中图分类号:TQ333.4 文献标志码:D

由北京市射线应用研究中心申请的专利(公开号CN 101824189A,公开日期2010-09-08)“一种三元乙丙橡胶发泡材料的制备工艺”,涉及的三元乙丙橡胶(EPDM)发泡材料由EPDM、防护体系、填充体系、增塑剂、硫化体系、发泡体系以

及辐射交联敏化剂组成,经混炼、裁片、电子束辐射预处理、硫化发泡、出模制成EPDM发泡材料。经过辐射预处理的胶片在开始热硫化发泡前具有一定的预交联度,可实现硫化速率与发泡速率的匹配,提高了产品的综合性能,缩短了预硫化时间,在节约能源的同时提高了生产效率。

## 使用改性晶须的天然橡胶复合材料及其制备方法

中图分类号:TQ332.5 文献标志码:D

由上海工程技术大学申请的专利(公开号CN 101824169A,公开日期2010-09-08)“使用改性晶须的天然橡胶复合材料及其制备方法”,提供了一种使用改性晶须的天然橡胶(NR)复合材料的制备方法:(1)将NR在开炼机中塑炼,获得NR塑炼胶;(2)将NR塑炼胶混炼,当NR塑炼胶包辊后,加入硬脂酸、氧化锌、促进剂、改性晶须和硫黄,混炼均匀制得混炼胶;(3)将混炼胶在平板硫化机中加热硫化制得NR复合材料。改性晶须经过超声波表面改性处理后,可使NR复合材料的物理性能和耐磨性能得到显著提高,且晶须改性工艺条件简便,成本低廉。
